

WANT YOUR BUSINESS TELEPHONY AT A FRACTION OF THE COST?

Forward^{IT} can customise a VoIP communication solution to FIT your business needs and help reduce your office phone costs, simplify your connections and give you greater flexibility in how you manage your telephone systems including mobile devices.

How it works

Instead of traditional analogue lines, VoIP uses your broadband connection to connect your existing phones and mobile devices to make, receive and manage calls. With VoIP you still have access to all the functionality of your previous telephone service but can also customise it to get exactly what you need.

Benefits

- » No more line rental fees and monthly telephone bills
- » make and receive calls at a fraction of the costs
- » excellent audio quality
- » transfer calls to another user
- » videoconferencing
- » call blocking
- » mailbox
- » create or switch calls to a conference
- » re-direct calls from the office, home or overseas

Want to know more about our customised solutions? Just look on the other side.

FIT Call Manager solution

Integrates IP communications, collaboration products, and applications into a single, unified system. FIT Call Manager helps create a strong unified communications system that will accommodate your immediate business needs, and adjust to your needs as they change and grow.

FIT SIP Trunking solution

Connects your IP PBX to the public telephone network, over a single IP connection. This simplifies the network and allows for greater flexibility and scalability.

- » Replace analogue lines with a simpler and more cost effective solution
- » Reduce equipment, line and carriage costs
- » Merge voice and data networks to reduce costs and better use of bandwidth
- » Quality equal to a landline
- » Supports: voice, fax, eftpos, dial-up modem and TTY calls.
